Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3636

Claims 10-20 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 3.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Wylie.

Figure 3A shows structure as claimed, including a plastic support member 200A having a channel with a migratory securing means 230A therein. A flexible porous membrane 240A is forced into the channel where it is secured by the securing means to the channel.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3636

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wylie.

The use of splines or "setting members" within channels for screens is old and well known in the art, and is discussed by Wylie in his specification. While the use of the securing means in the channel of Wylie is intended to replace the splines in terms of securing the membrane within the channel, it is the examiner's contention that one of ordinary skill in the art may apply a spline member within the channel of Wylie for aesthetic purposes, to cover the open channel of the support member, and/or for the purpose of preventing dirt from entering the channel. Note that the application of the spline within the channel before the securing means is set, would naturally adhere the spline member to the membrane. The specific material of the membrane and the securing means is considered a matter of design choice.

Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wylie in view of either Koepke or Stumpf et al.

To have applied the teachings of Wylie, wherein a securing means and setting member is provided within a channel, to a seating structure, such as is shown by Koepke (figs. 3,4) and Stumpf (figs. 32-35), would have been obvious to

Art Unit: 3636

one with ordinary skill in the art, thereby providing a more secure engagement between the fabric membrane and the support member.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Moulton, Kindig et al, Colson et al, Welfonder and Coffield show various features of the invention.
